tiki.org Teams and Social Networking

Dogfood

This page is an archive of ideas

This page is to list all wishes for Teams and Community Building Team, which we hope to get for Tiki10 and test regularly on http://next.tiki.org/ Many of these are configurations. For the ones that can't done within the next few week, they will be converted to proper wishes on dev.tiki.org

- Get to know people
- Contacting the right people
- Starting Local User Groups
- Starting special interest groups
- Making subdomains per country/language/topic
- 1-liner for group membership
- Not categorized
- Code to test in 10.x

Get to know people

- Make it easy to see who is involved in what, what they did,

Contacting the right people

- Without risking spam
- http://dev.tiki.org/wish2302

Starting Local User Groups

- We detect that you are in this city / country, please confirm "To my location"
- Country picker doesn't work at https://tiki.org/tiki-register.php
  - It's possible to type an invalid Country name

Starting special interest groups

Making subdomains
1-liner for group membership

- Comment line/box for when someone joins is added to a group
  - This is an explanation of the reason person joined, what there roll is, etc.
  - http://tiki.org/Lists+of+members+of+all+Teams would look more like WhoWhat but is still dynamically generated. People could indicate they want to "Lead", "Help", "Follow" etc.
  - Would be great also to list languages for Team i18n
- This info should also be part of the notification email when someone is watching a group
  - And in this notification email, please also add who added the person to the group

Not categorized

- Users can send internal messages to themselves, which is weird
- tracker8&sort_mode=f_123_desc -> country filter is not working
- List of all UserPages, split per country
- Lists of members of all Teams
  - Should have link to UserPage if there is one, and option to show country flag
- The "assign" time/date here
- How could I give tiki_p_broadcast to a user for his own group, but not for any group, especially Registered and Team Developers?
  - Easy way to message group (internal message system or email) (for individuals, it should already be OK)
- Make Developers map better
  - List users per country would be nice
  - Make tiki-user_preferences.php?view_user= less ugly when no lat/long has been picked
- diff_style= is there twice
- SPAM prevention
  - Spam
- PluginMemberList: link to username link instead of user number Lists of members of all Teams
- Group member watch send emails when user is added/removed via Lists of members of all Teams.
  - Nice: But could we know who added/removed and have the 1-line message in the mail?
- We want group members to receive such notifications of changes to their group

Code to test in 10.x

Need to activate: user_in_search_result
Done, but next is a need to fix re-indexing.

No results for query.
