

moved: [External Wikis](#)

Links to external Wikis, inter-Wiki links

As admin you can define sites that can be used as external Wikis. From the **admin menu** click on the **External Wikis** link to get to this screen:

The screenshot shows a web interface for managing external wikis. At the top is a form titled "Create/Edit External Wiki". The form has two main input fields: "name:" and "URL (use \$page to be replaced by the page name in the URL example: http://www.example.com/tiki-index.php?page=\$page):". Below the URL field is a "Save" button. Below the form is a table titled "External Wiki". The table has three columns: "name", "extwiki", and "action". At the bottom right of the table, it says "Page: 1/0".

Create/Edit External Wiki		
name:		
URL (use \$page to be replaced by the page name in the URL example: http://www.example.com/tiki-index.php?page=\$page):		
		Save

External Wiki		
name	extwiki	action

Page: 1/0

In this screen you can add any number of external Wiki sites. You have to enter a name (no whitespaces, please) and the URL in the **URL** field. The special *\$page* syntax must be used to place the name of the page in the URL.

Once the external Wikis are set up you can use this syntax to link to an external Wiki:

((WikiName:PageName))

For example *WikiName:PageName* would be replaced by a link to the URL for *WikiName* and the specific *PageName* Wiki page. Something like: *<http://tikiwiki.org/tiki-index.php?page=PageName>*

InterWiki

For more information about a common map, see [InterWiki](#) on Meatball Wiki.
