Tiki vs SharePoint

Similar

- Both are a collaborative application with lots of features.
- Both are very present in the enterprise

Different

- Sharepoint is a commercial product, while Tiki is a community-managed open source project. License: LGPL.
- Tiki is a LAMP application whereas SharePoint is is designed to run on a Windows Server.
- Tiki comes from the web app/wiki world (where everything is browser-based) where as SharePoint comes from the Document Management System (DMS) world where things are based on files/desktop-apps.
- Tiki has features that go beyond the scope of SharePoint (ex.: because they are covered by Microsoft Outlook)

Similar features, different names

Tiki Trackers <-> SharePoint Lists
Tiki File Gallery and Tiki WebDAV are similar to SharePoint file management (does this feature have a name?)

References

Even references that don't directly discuss Tiki may have comparisons are relevant to Tiki.
