

# TikiCast

## General Description

---

Automatic creation, management and deletion of subdomains, with associated web site and mail handling services (eventually these two services will be Tiki-based).

## Key Function and sub-features

---

- Automatially edit DNS entries to add and remove subdomains, manage MX, A, NS, PTR and CNAME entries
- Automatically edit Apache vhosts file to configure webservice on the subdomain
- Site Admins can add, remove, lock or unlock subdomains (accounts) via Tiki web interface
- MultiTiki (including mail) instance or TikiForge project installation on each subdomain.
