

# TikiModSecurity

Protect your dynamic webapps using <http://www.modsecurity.org/>

On gentoo

```
emerge mod_security
```

Then setup /etc/apache2/conf/modules.d/99\_mod\_security.conf

Most important is, you will only want to filter your dynamic content, not the static pages, so make sure the 'SecFilterEngine' directive is set to 'DynamicOnly'.

For protecting Tikiwiki these are useful:

```
SecFilter "tiki-install.php"  
SecFilter "tiki-edit_templates.php"
```

The modsecurity rules at gotroot got updated on aug12 2005, check them out:

[http://www.gotroot.com/mod\\_security+rules](http://www.gotroot.com/mod_security+rules)

also see the autoupdater script there: "Downloading the rules automatically" at the bottom of the page...

Take a look at the example below for inspiration:

This script should work with modsecurity 1.8.6 and apache2.

```
<IfDefine SECURITY>  
  <IfModule !mod_security.c>  
    LoadModule security_module    extramodules/mod_security.so  
  </IfModule>  
</IfDefine>  
  
# Examples below are taken from the online documentation  
# Refer to:  
# http://www.modsecurity.org/documentation/quick-examples.html  
  
<IfModule mod_security.c>  
  
  # Turn the filtering engine On or Off  
  SecFilterEngine On  
  SecFilter DynamicOnly  
  # Action to take by default  
  SecFilterDefaultAction "deny,log,status:403"  
  
  SecServerSignature "Apache2"  
  # Make sure that URL encoding is valid  
  SecFilterCheckURLEncoding On
```

```
SecFilterCheckUnicodeEncoding Off
SecFilterCheckCookieFormat Off
# Should mod_security inspect POST payloads
SecFilterScanPOST Off

# Only allow bytes from this range
SecFilterForceByteRange 1 255

# The audit engine works independently and
# can be turned On or Off on the per-server or
# on the per-directory basis. "On" will log everything,
# "DynamicOrRelevant" will log dynamic requests or violations,
# and "RelevantOnly" will only log policy violations
SecAuditEngine RelevantOnly

# The name of the audit log file
SecAuditLog logs/audit_log

SecFilterDebugLog logs/modsec_debug_log
SecFilterDebugLevel 0

#
