

# Trackers

Using Trackers, you can create forms for collecting data and make reports from that data. Trackers can combine structured information collected from users. The Trackers feature is a powerful, flexible tool. Originally, trackers were used to collect and manage bugs in Tikiwiki. They evolved into an open ended system where you can track any kind of user input in a customizable form. Each tracker has its own mini database. Users with the appropriate permissions can devise trackers to collect any kind of information that you want.

## What can Trackers be used for?

---

Trackers can recreate online any kind of table or spreadsheet, not including the fancy formatting or calculations.

- support tickets
- contact managers
- feature requests
- purchase orders
- bug reports
- feedback reports
- news submissions
- project management

### Trackers can also:

- be used to collect additional data from users upon registration.
- be used like a customizable articles feature with admin definable forms
- assist workflows by tracking tasks.
- act as expanded polls, surveys or quizzes
- import and export their settings and data.

### Trackers can't:

- do calculations (try the [Spreadsheet](#) feature)

---
