UserPageExtimes

I'm pretty new to TikiWiki, but excited about it.

I'm particularly interested in the Semantic features of TW. I run the Pittsburgh Hash House Harriers website and a small, outdated personal site where I'll be playing with a lot of these features.

I've done some PHP, but it's not my favorite, so I'm slightly reluctant to dive right in, but I realize that to get what I want done, I'm going to have to.

I recently implemented a Pretty Tracker and found the documentation difficult to follow; I should probably work to fix that, eh?

I'm pretty new to TikiWiki, but excited about it.
