Caution, Curmudgeon

I am new to [Tikiwiki](#) — not so to wikis, as I have been using a [MoinMoin](#) "knockoff" known as [MoniWiki](#) at [AmalakiMoniwikiOnline](#).

Actually, I had found [Tikiwiki](#) too difficult to install when I tried an earlier version of it. This was when I was looking at [Open Source Content Management](#), as part of a search for greater understanding of [Information Architecture](#).

I first had looked at [PhpNuke](#) (Most likely, the best known and most popular, Open Source CMS), the more powerful [PostNuke](#), etc. Eventually, I settled on [Drupal](#) because it offers a taxonomy. And, yes, I know that there is [more to CMS](#) than categories!

I took a second look at [Tikiwiki](#) when the [KDE Community Wiki Site](#) chose it.

About Me

"Mostly harmless"

In Appreciation

I wanted to comment on [UserPageDamian](#). I very much appreciated the help he provided to me when I visit #tikiwiki on the Freenode IRC network. His enthusiasm for [Tikiwiki](#) is contagious, even more than his enthusiasm for Kendall mint cakes!

I wanted to comment on [UserPageMose](#). I very much appreciated the help he provided to me when I visit #tikiwiki on the Freenode IRC network. He has very good intuition when it comes to troubleshooting; and, for a mutated troll, he was actually quite pleasant.

I appreciate that [UserPageohertel](#) took the time to explain some fine details about using the [CVS function in Eclipse](#).

Thanks to [djnz](#) (Paul) for explaining to me [why it is helpful](#) when upgrading on a shared host to work with three copies rather than two.

A great big thanks to [UserPagemglunny](#) for helping me with [SQLite](#). At this time, the improvement seems only peripherally related to Tikiwiki, i.e., it helps me run SoupyBot. Nonetheless, one never knows, does one?

1.1. tikiwiki

I usually go by ktest on #tikiwiki.

Get the Hook

You know you love it.
