UserPageMixolyde

I am the administrator of the Tiki Wiki used internally by my company.
Here's a screenshot

My normal home page is http://www.techhouse.us/Hosted/Brianw and my community home page is
http://www.techhouse.us

Currently I contribute to the project mostly by giving feedback on my company's usage and reporting
bugs.

Wishlist

- JGraphPad
  - Polygon shape tool
  - Ability to rotate shapes
- Integrated task system with these features:
  - 'To do' tasks and 'Completed' tasks for each user
  - Ability to see all tasks for all users and sort by fields** Tasks have name, priority, assigned to, notes, project code, deadline
  - Ability to easily hand a task off to another user, or move from to do to completed
  - The Tracker system can almost do this, but it's still clunky for quick and easy use, same for Galaxia
- Wiki Editing
  - Preview window and wiki code help boxes that pop up in a new window for easier editing
  - Easier code for italics, or more explicit statement of '2 single quotes not 1 double quote'
  - A 'Save and Continue Editing' button on wiki pages so that constant save, edit, scroll cycle doesn't have to be repeated for session timeouts
  - A spellchecker that ignored case
- Trackers
  - Ability to rearrange the order of the fields w/o removing and readding them
  - A field type for urls that on display in the list would provide a link
  - Ability to choose whether to show the # of comments in the list view or not
  - Show 'add new item' box at the bottom of the list page
  - a +/- collapse button the 'add new item' box to reduce space when just viewing items.
  - a printer-friendly button for the tracker list page.
