UserPagebluybrink

I've been told to use this page for bragging, so here it comes😁

I'm a senior technical consultant with fair amount of experience in architectures.
I've built a bunch of projects on different platforms, but my personal preference is PHP.

I'm pretty new to Tiki so please be patient with me 🙄.

As I usually don't have the luxury of choosing the hardware platform for my projects, I often need to implement on Windows/IIS.

I've encounteres a bunch of nasty problems with this platform in combination with Tikiwiki, and here's a fix for at least a couple of them.

[Workarounds for some issues with Tiki on Windows/IIS](#)

[Troubleshooting Windows/IIS Instalations](#)

may all beings benefit from my actions
may all beings live in peace, harmony, and happiness

may all beings become happy
