UserPagectjatmiko

Hi All,

Call me Cahya. I just getting started with Tikiwiki since 3rd March 2004. Install this lovely CMS for my personal Home LAN Intranet together with phpdev, it is so easy and works flawlessly. But installing its internet version quiet not so 😟.

Well, firstly my CMS was Zope (there is ZWiki inside!), then phpnuke, then postnuke, then I saw Drupal once, but never give it a try, then ..now, I would say this is really a killer. Love the neat.css 🙂

Thanks to all behind this great S/W & of course the Tikiwiki Community 🤓 😀

Regards,

-cah
