demo.tiki.org

demo.tiki.org is a series of Tiki instances of various versions.

- They are usually kept up to date of the most recent version of each branch.
- The data can be wiped at any time to reset to a fresh install
- It is a great way to test if a bug you see in one version is also present in another. Password is visible at: http://demo.tiki.org/
- If you don't see the login box, just visit /tiki-login.php

If you are a Tiki developer, and would like SSH access to the server (to test a commit, test a bug fix), please contact Sven Leutloff (leu at thisdomainname)

There are also other demo sites available.
