Details

This document describes a method of adding the login form into the tiki-top_bar template.

The Juicy Stuff

Ok, lets start by looking at the default content of the tiki-top_bar:

```
{tr}This is{/tr} Tiki v1.8.3 (CVS) -Polaris- 2002-2004 {tr}by the{/tr} {tr}Tiki community{/tr} {if  
$feature_calendar eq 'y' and $tiki_p_view_calendar eq 'y'} {$smarty.now|tiki_short_datetime} {else}  
{$smarty.now|tiki_short_datetime} {/if} {if $tiki_p_admin eq 'y' and $feature_debug_console eq 'y'}  
//{tr}debug{/tr} {/if}
```

Really this wants to be tidied up to your own taste, so heres a variation:

```
{tr}This is{/tr} Tiki -Polaris-
```

A little better for what we want to do 😊

Now we need to extra the good stuff from templates/modules/mod-login_box.tpl, here I only want the 2 fields and the button to send the form, so we need to accomodate this:

```
□□
```

btw the last hidden turns on the remember me box 😊

Now if we combine the two into a table we get something like this for the tiki-top_bar.tpl:

```
{tr}This is{/tr} Tiki -Polaris- User:  Pass: 
```

Now thats looking cool! 🍷 However when someones logged in they still see the login boxes and now welcome Mr X and a signout button. So heres the final version, with a smarty IF to check if the user is logged in or not:

```
{tr}This is{/tr} Tiki -Polaris- {if $user>Welcome: {$user} {tr}Sign  
Out{/tr} {else}  
User:  Pass:   
{/if}
```

Hope that helps everyone!

p.s. To change styles you can always add or modify the existing values in your CSS file:

```
input {color : #000000; background: #EEEEEE; font: normal 10px Verdana, Arial, Helvetica, sans-  
serif; border: 1px solid #999999; } input[type=submit] { -moz-border-radius: 0.8em;}  
input[type=submit]:hover { color: #000000; background-image: url(mods/tab-active.jpg); }
```

Note that tab backgrounds and moz-border-radius DONT work on Internet Explorer, hey have you tried this site under Mozilla you people! 😊
