General Description

Quizzes can be used for fun, for trivia, for contests or for creating courses and e-learning sites. A quiz is made of a number of multiple-choice questions, each option in a question can be assigned positive or negative points. After the user takes a quiz Tiki computes the score and an answer can be displayed to the user depending on his or her score. You can control if quizzes can be repeated and you can indicate a time limit for quizzes. If you want, quiz results can be stored and you can review the results. Statistics are always stored for quizzes--keeping track of the results of each quiz.
