

Installation

- Install Tiki fresh install **tested by a number of users**
- Check that install procedure is smooth for new installer **tested**
- Does the admin menu appear when first install?
- tiki_p_edit_categorized issue on upgrading [Handle tiki_p_edit_categories/categorized](#) Note need to avoid adding this after explicit removal in subsequent upgrades **done**
- Minor finetuning to upgrade UI to avoid accidental upgrade problem **done**
- Remove old profiles for now - TODO before final release new profiles
- List what is no longer supported in 1.10 - warning to upgraders (see Documentation below)

Reorganize admin features panel checkboxes into

- Major features (Wiki, Forum, Image gallery, Calendar.....) **done**
- Technical features (Ajax, Mootools, etc...)
- Site-wide features (Categories/Freetags)
- Experimental features (includes new, stability uncertain, or less maintained)
- Minor features (Quiz, Surveys, etc)

Allow grouping of themes into "latest", "legacy" and soÂ on.

- **cyberdrek** is on this (not complete yet)

Feature marking as experimental

- mark in admin panel features that may remain experimental
- Refer to [Release110Checklist](#) for info on state of features

Security

- Make sure security enhancements in 1.9 are in 1.10 **lphuberdeau done**

Feature bugÂ squashing

- Empty first page on lists that have a lot of items that cannot be seen because of perms e.g. [forum listing](#) but this could affect other lists as well?.. **this could be complicated and may cause new bugs so maybe better to leave it for now**
- [Captcha interferes with OpenID](#) **lphuberdeau done**

Bug triaging and flagging with 1.10 Release

Does this affect 1.10?

[rollback](#) does not [rollback page description](#)

Refer [Release110](#) tagged bugs

Feature refinements (probably won't be done before RC1, but neverthelessÂ tabled)

It is way too difficult to reuse image gallery images in wiki pages or elsewhere

Feature testing

- Test combinations of user login [Group homepage redirection at login time not working](#)
- Turn AJAX and Mootools on - stretch this to the limit, with PHP Layers menu and Wysiwyg. Try on different browsers. Try and get js errors.
- Try and activate SEF URL and see if it works and verify bug [SEF conflicts with best language](#)
- Image galleries permissions testing and check if bug exists [Permissions for individual categories](#)
- Try out new file galleries with and without AJAX. **nyloth is working on this**
- Try out wiki page attachments. Set permissions on page. Are attachments protected?
- Try out forum new features. Create a forum with all the new fancy forum options turned on. Pagination, etc, threading, flat forum vs non-flat. Try to break stuff.
- Try calendar.
- Try RSS feeds for all sections. [malformed XML](#)

Module testing

- Categories module breaks `browse_categories`
- check for permission correctness
- check for feature syntax correctness
- `mod_since_last_visit_new` problem

Plugin testing

- multiple module pugins showing same title

Documentation

- List what is no longer supported in 1.10 - warning to upgraders

Packaging

- lphuberdeau done. To put on Sourceforge late Mon with some essential upgrade/beta information.
