I sometimes think of myself as a

unique
antique
gique

In fact, I have a tee shirt that says so. I have been an interactive graphics programmer for 20+ years. My current passions are [fractal art](#), gardening and [genealogy](#). My perennial passions are reading, art and cat-watching.

I have installed a tiki at work, which was how I got into this, and have been trying to install one on my <http://www.mathsong.com> [MathSong] website. I was finally successful. I would like to have several categories on it, a more or less private one for my family's photos, a collaborative genealogy effort on the Johns family, and some collaborative documentation on fractal art — which is where I am started.

Server went down, and I haven't gotten the tiki back up there, but I have installed two others at:

<http://www.gausschildren.org/tiki>

<http://www.omnivores.org/tiki>
