

## General Description

The goal is to allow Tiki sites to be accessed by each and every man, woman, and child using the necessary assistive technology. Such technology can include screen readers, mouth balls, touch sticks, or one of a myriad of other devices. To provide users of these assistive technology devices with equal access to information, Tikiwiki must present the necessary information in a specific manner. In doing so, Tikiwiki will automatically adapt the presentation of any given page to the limits and abilities of the user, and that user's user agent. Ideally, this process should put as little burden as possible on Tikiwiki, theme developers, administrators, and users. It should also ideally be completely transparent to all, while being handled by & integrated into the core, while also preserving the environment & vision of Tikiwiki.

## Achieving WAI-508 Compliance

**Notice:** This document is intended to serve as a Roadmap for what needs to be done for WAI-508 accessibility in Tikiwiki. It is not a how-to documentation. If you would like to help make Tikiwiki WAI-508 compliant, please contact [musus](#) for specifics.

Below is a step-by-step process for building the first of Tiki-Certified WAI-508 Compliant Themes. The theme will be called *508*. If you would like to join the WAI-508 Team, checkout [#tikiaccess](#) on [irc.freenode.net](#) & get in on the action. All are welcome.

### Steps:

#### 1. Forms

1. Ensure all form fields are labeled with a label tag, and tether it to its corresponding form field using a specific convention.
2. Ensure labels are placed to the left of their assigned form field
3. Modify *name* attribute for form fields to match *ID* attribute (some browsers don't yet support the *ID* attribute)
4. Remove local styling (P1)
5. Format input fields & buttons for height, background color, width,

described on WebAccessibilityInitiativeDev

3. Replace ALT attribute with LONGDESC when applicable (P1)

4. Remove TITLE attribute (P1)

8. Add strategically placed "Jump to ..." links & anchors (P2)

9. Develop ))TikiAccessibility(( Certified icon (P1)

10. Expand any & all abbreviations & acronyms (P3)

11. Set logical tab order (P3)
